Dr. D. Adams
Safety & Reliability

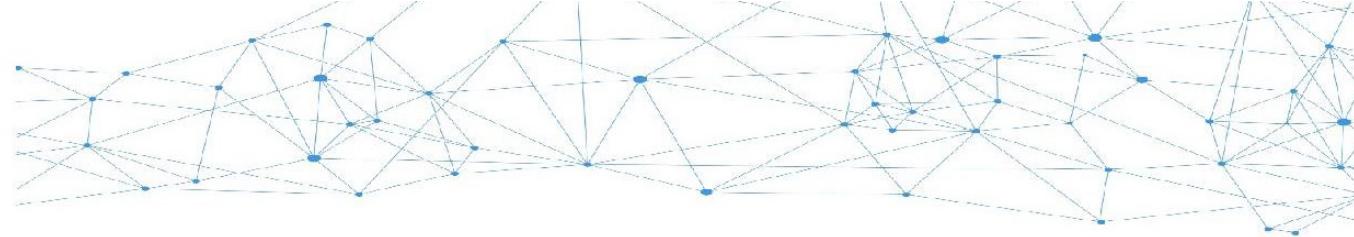

CTR – Cell Test Rig

Electrical Measurement Methods

- max. charge current = 220 A
- max. discharge curr. = 400 A
- max. voltage = 18 V

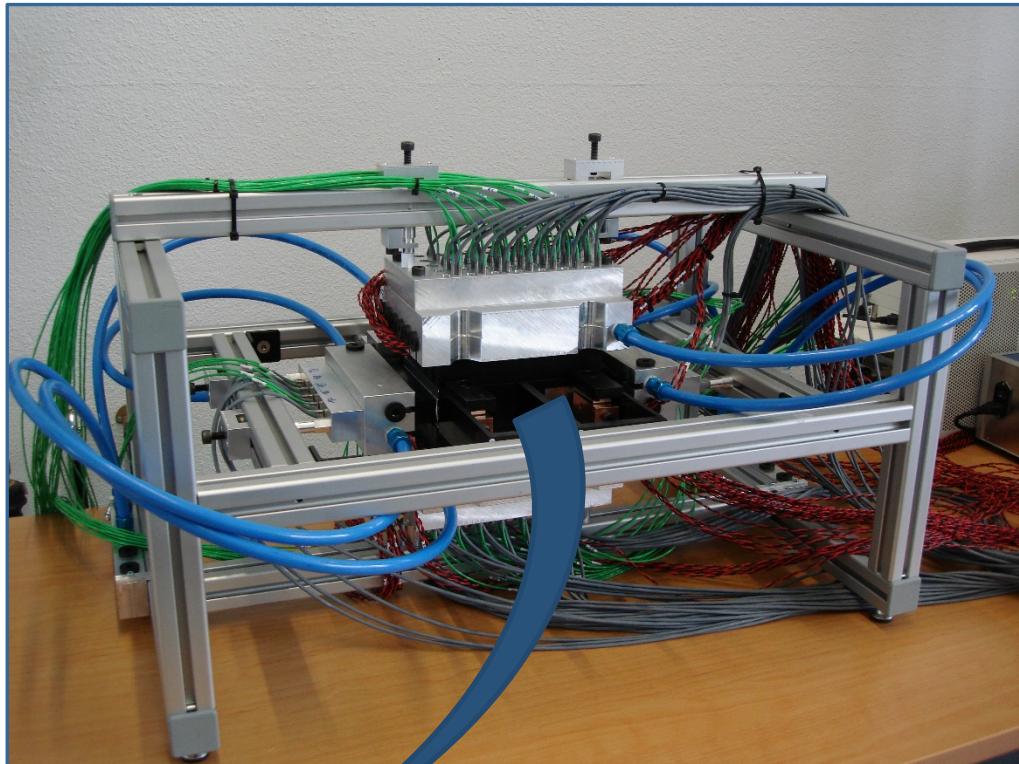

for prismatic cells
(for cylindrical cells in preparation)

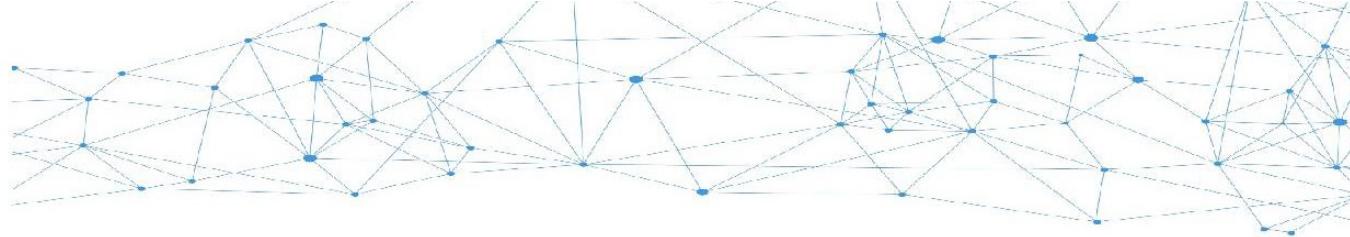

CTR – Cell Test Rig

Thermal Measurement Methods

- const. surface temperature
- const. surface heat flux
- ideal isolated,
(i.e. heat flux = 0 W/m²)

**in situ resolution
totally 87 points**

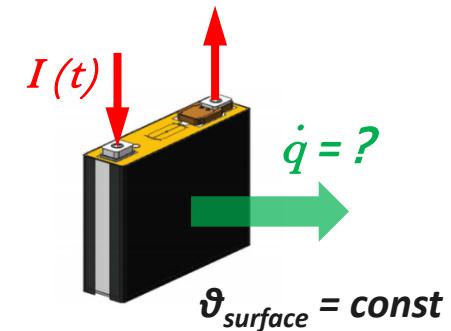

CTR – Cell Test Rig

New Unique Analysis Capabilities

- a) mode - const. surface temp. \Rightarrow detection of local heat flux distribution

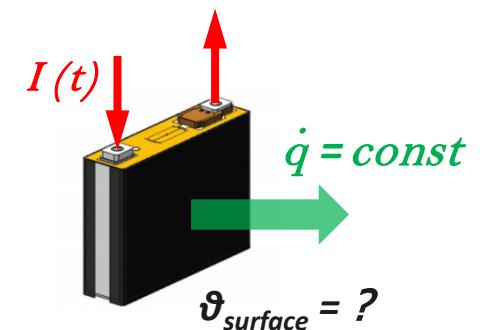

\hookrightarrow *Measurement of required cooling power ?*

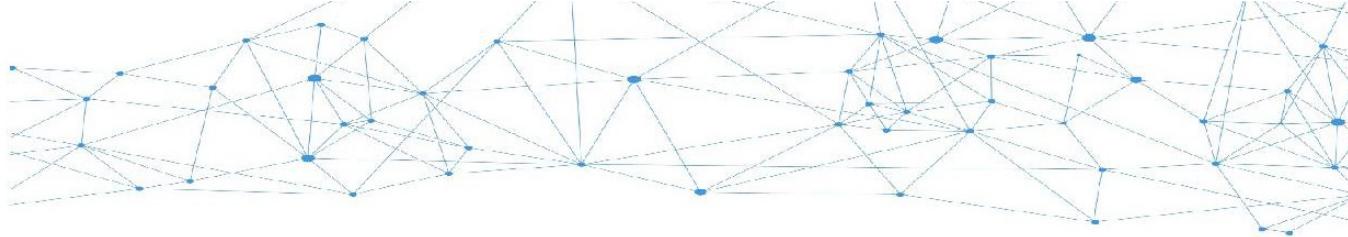

\hookrightarrow *Where to cool the battery best ?*

- b) mode - const. surface heat flux \Rightarrow detection of local surface temperature distribution

\hookrightarrow *Localization of thermal hot spots ?*

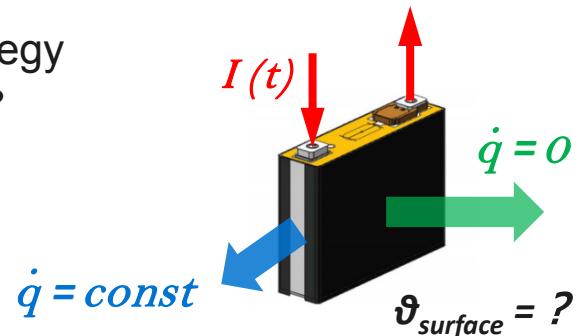

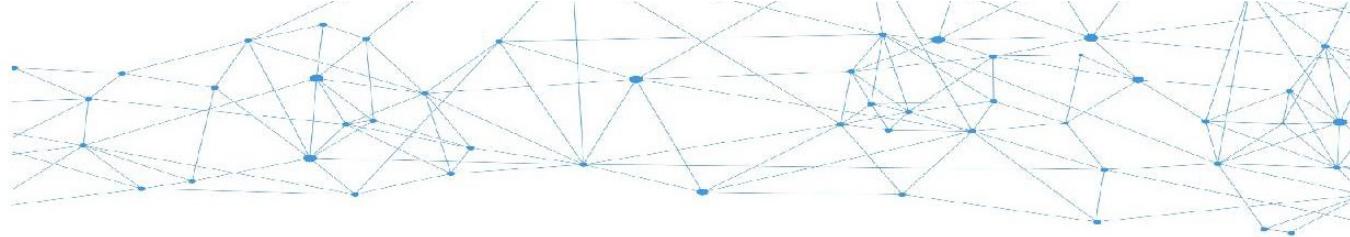

CTR – Cell Test Rig

New Unique Analysis Capabilities

- c) mode - ideal isolated with locally cooled areas \Rightarrow analysis of a discrete cooling strategy
 - \hookrightarrow *Verification of cooling methods ?*
 - \hookrightarrow *Determination of actual cooling power ?*
 - \hookrightarrow *Recording of engaged temperature distribution ?*

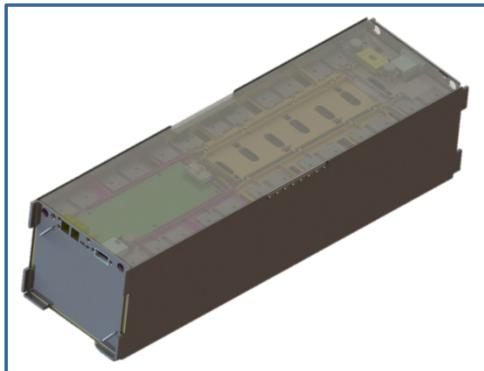

MTR – *Module Test Rig*

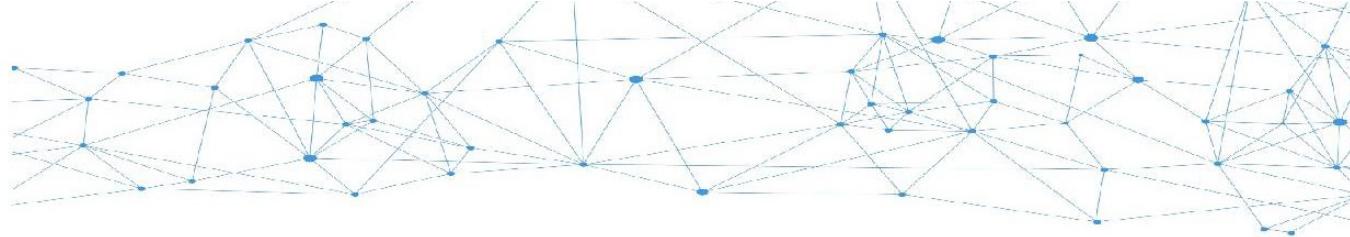

Electrical Measurement Methods

- max. charge current = 365 A
- max. discharge curr. = 365 A
- max. voltage = 65 V

for all kinds of battery
modules (up to 1000 mm x 800 mm)

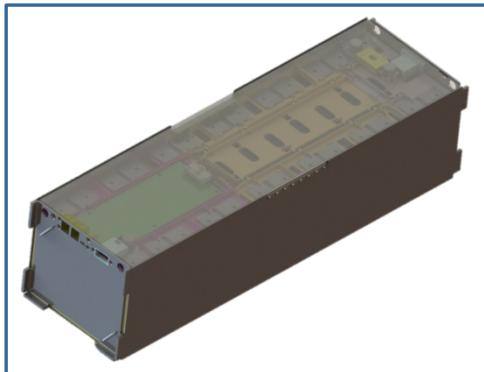

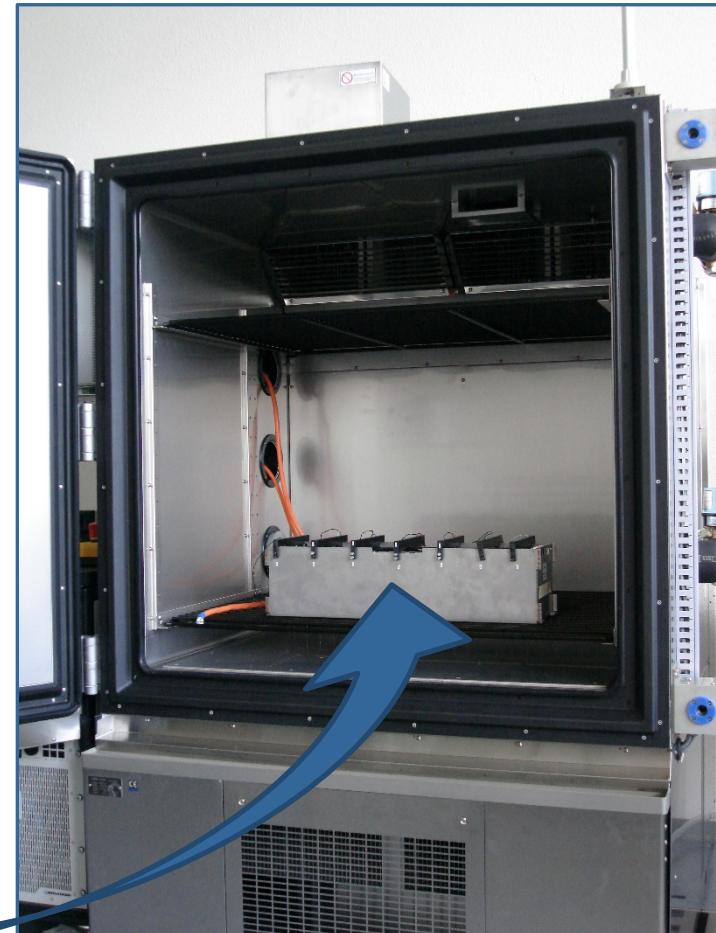

MTR – *Module Test Rig*

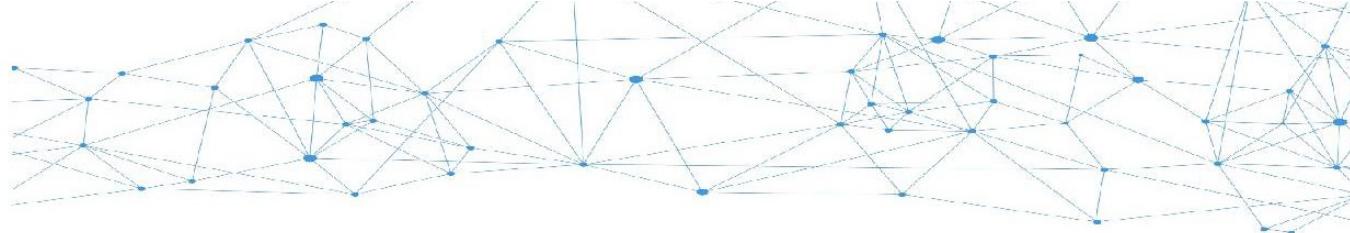

Thermal Measurement Methods

- max. chamber temp. = 100 ° C
- min. chamber temp. = -40 ° C
- max. chamber heat load = 2.85 kW

**for all kinds of battery
modules (up to 1000 mm x 800 mm)**
